

KEYES 801S Vibration Sensor Module

KEYES 801S Vibration Sensor Module

Main chip: LM393, vibration probe

Working voltage: DC 3-5V

Main features:

- 1. with signal output indicator;*
- 2. with analog output and TTL level signal output;*
- 3. high level is for valid signal output, indicator light is off;*
- 4. adjustable sensitivity (fine adjustment);*
- 5. wide range of vibration detection, non-directional;*
- 6. with mounting holes, flexible and convenient installation of hardware.*

Application: used in burglar alarm, electronic lock, mechanical equipment vibration detection, vibration detecting occasions such as bull 's-eye count in the shooting range test;
